Below you will find installation instructions for Nix, the package manager.

1. Quick install

The quickest way to install Nix is to open a terminal and run the following command (as a user other than `root` with `sudo` permission):

```
$ curl -L https://nixos.org/
```

Make sure to follow the instructions output by the script. The installation script requires that you have `sudo` access to `root`.

2. Verify instalation

3. Uninstal

Instance command

You can create an instance using the AWS Management Console by clicking one of the Launch buttons. You can also create an instance from the command line. For example, to create an instance in region `us-east-1` using the EC2 API tools, just run:

```
$ ec2-run-instances --region us-east-
```
